

# You see new gadgets. We see new American jobs.

**T**he cool devices we enjoy and rely upon are much more than gadgets. They're the lifeblood of many Americans whose jobs depend on continued growth in the consumer electronics sector.

Free trade accounts for phenomenal economic expansion, both in the U.S. and abroad.

In 2006, the EU, Canada, Mexico and China – yes, China – purchased \$220 billion in American high-tech products. Those purchases, unhampered by trade tariffs, accounted for 21% of total U.S. exports, making high-tech America's largest export sector. Overall, international trade supports hundreds of thousands of American jobs in the CE industry – and hundreds of thousands more in related sectors. Even goods imported from China alone support 60,000 American jobs.

Nothing freezes innovation and job growth like protectionism. Support America's free trade agreements. Support cool jobs.
